

ECS Cathedral Construction ongoing

Dear Bishop,

This is the level our Cathedral has reached, the remaining part is beam and finishing plus the front circle.

Beam requires 12000 SSP equivalent of 3500 USD

The front circle according to builders require 20,000 bricks but 1000 bricks cost 200 SSP and transport with 220 SSP. This means each one 1000 bricks buying and transportation costs 420 SSP equivalent of 120 USD per current exchange rate in Aweil. Therefore, 20,000 bricks will cost us 2400 dollars

After a beam, we shall need to buy at least 40,000 bricks per engineer estimation, which will cost us 4,800 USD equivalent of 19,920 SSP

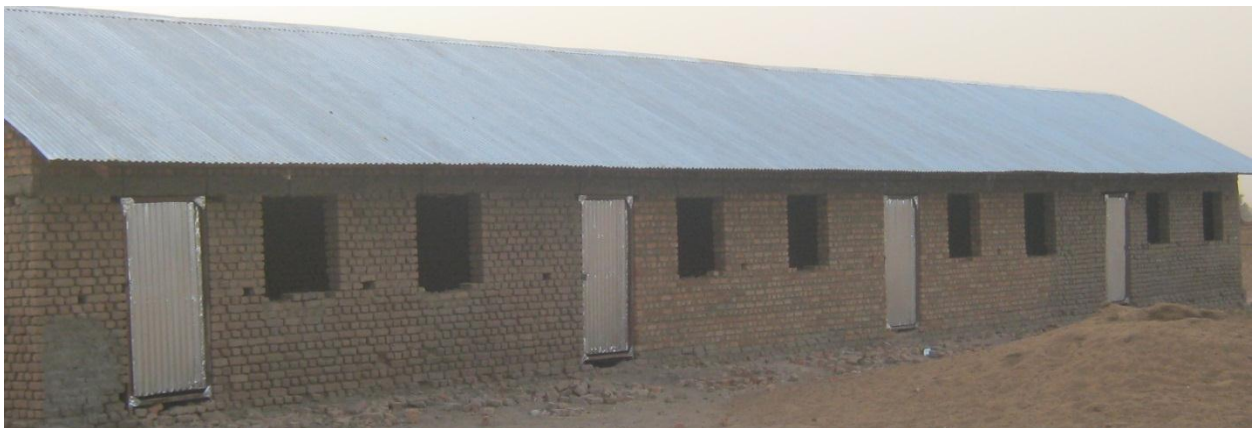

We say thank you very much for those who contributed a lot, especially our congregations, individual friends and donors.

The progress report

In the next round, we plan to put the beam if our finance is enough to manage the beam.

School doors are fixed

We plan to revisit the Ministry of education to open this school if they provide the teachers so that this school starts this year.

I visited TEARFUND, they want me to write a note telling them that this school will open this year, and TEARFUND is ready to dig and build the toilets
